ios_base

ios_base::ios_base
ios_base::~ios_base
member functions:
ios_base::flags
ios_base::getloc
ios_base::imbue
ios_base::iword
ios_base::precision
ios_base::pword
ios_base::register_callback
ios_base::setf
ios_base::sync_with_stdio
ios_base::unsetf

public member type

std::ios_base::iostate

<ios> <iostream>

Type for stream state flags

Bitmask type to represent stream *error state flags*.

All stream objects keep information on the state of the object internally. This information can be retrieved as an element of this type by calling member function `basic_ios::rdstate` or set by calling `basic_ios::setstate`.

The values passed and retrieved by these functions can be any valid combination (using the boolean OR operator, "|") of the following member constants:

flag value	indicates
eofbit	End-Of-File reached while performing an extracting operation on an input stream.
failbit	The last input operation failed because of an error related to the internal logic of the operation itself.
badbit	Error due to the failure of an input/output operation on the stream buffer.
goodbit	No error. Represents the absence of all the above (the value zero).

These constants are defined in the `ios_base` class as public members. Therefore, they can be referred to either directly by their name as `ios_base` members (like `ios_base::badbit`) or by using any of their inherited classes or instantiated objects, like for example `ios::eofbit` or `cin.goodbit`.

See also

ios::rdstate	Get error state flags (public member function)
ios::setstate	Set error state flag (public member function)
ios::good	Check whether state of stream is good (public member function)
ios::bad	Check whether badbit is set (public member function)
ios::fail	Check whether either failbit or badbit is set (public member function)
ios::eof	Check whether eofbit is set (public member function)
