stringbuf::seekpos

stringbuf::setbuf

stringbuf::underflow

protected virtual member function

**std::stringbuf::setbuf** <sstream>

```
streambuf* setbuf (char* s, streamsize n);
```

**Set buffer**

Virtual function called by the public member function `pubsetbuf` to influence the object in a way that is dependent on the library implementation.

If both arguments are zero, the call is guaranteed to have no effect on the `stringbuf` object.

**Parameters**

s, n

Implementation-defined.  
If both are zero, no effect.  
`streamsize` is a signed integral type.

**Return Value**

Returns this.

**Data races**

If both arguments are zero, it introduces no data races.  
Otherwise, unspecified.

**Exception safety**

**Basic guarantee:** if an exception is thrown, the object is in a valid state.

**See also**

**streambuf::pubsetbuf** Set buffer array (public member function )
