stringstream

stringstream::stringstream

public member functions:

stringstream::operator=

stringstream::rdbuf

stringstream::str

stringstream::swap

non-member overloads:

swap (stringstream)

PatchIT Updating Librar
PatchIT offers fully automated updating libraries for coding

public member function

std::stringstream::operator=

copy (1) stringstream& operator= (const stringstream&) = delete;
move (2) stringstream& operator= (stringstream& rhs);

Move assignment

Acquires the contents of *rhs*, by move-assigning its members and base classes.

Move assigning its internal `stringbuf` object leaves unspecified whether the internal sequence of characters is the one in *rhs* before the call, or a copy of it. In any case, both objects use independent sequences after the call.

Parameters

rhs

Another `stringstream` object.

Return Value

\*this

Data races

Modifies both stream objects (\*this and *rhs*).

Exception safety

**No-throw guarantee:** this member function never throws exceptions.
